Flexi Screen Lite

Ref. - FLEXISCREENLITE

EAN13 - 5600217588336

Box - 30 x 40 x 20 cm

Weight - 0,9 kg

Units per Box - 1

Features

Flexi Screen Lite offers an efficient, cost-effective solution for vocal recording in venues with insufficient acoustic control. The semicircular microphone surround has a dual functionality, absorbing the vocalist's energy on the inside to give a less ambient sound, while at the same time, partially absorbing scattered room reflections on the outside, helping to isolate the sound source more effectively.

Flexi Screen Lite's acoustic foam structure has optimum density and thickness, using a series of cavities both to reinforce the absorption effect and add structural support to the joint mechanism. Its special lightweight design makes it suitable for location-based recording activities and for use in venues such as project studios and classrooms, where it can be assembled in less than 15 seconds.

Designed for use with a range of microphones, Flexi Screen Lite can be adjusted either vertically or horizontally.

Technical Information

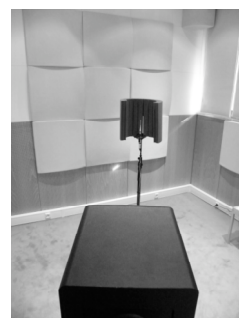

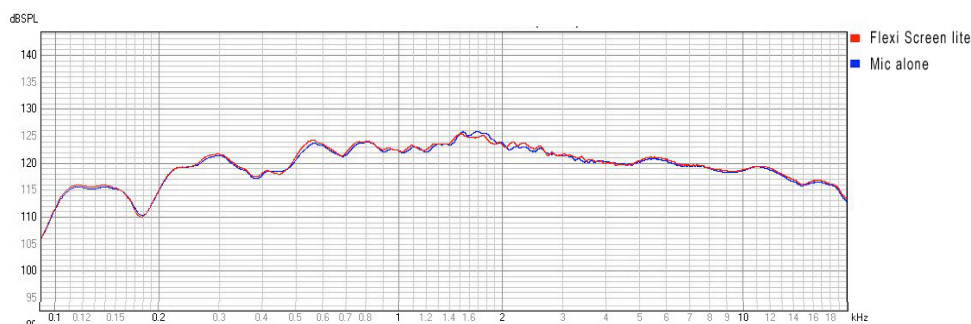

Material – Acoustic Foam

Color – (Charcoal Gray)

Adjustment – 2 positions

Time to assemble – 15 seconds

Flexi Screen Lite - microphone response

Flexi Screen Lite - acoustic barrier/isolation
